SUMMARY

Oracle Certified Java SE 17 Developer with more than **3+ years** of experience building secure, scalable applications using **Java 17, Spring Boot, and Microservices**. Strong backend expertise in **Core Java, Spring Security, Hibernate, and REST APIs**, with solid knowledge of **OOP and Multithreading**. Experienced with **Spring Cloud, API Gateway, and JWT Authentication**.

Proficient in **MySQL, Oracle, MongoDB, and DynamoDB** using **JPA/Hibernate**. Hands-on with **Docker, Kubernetes, Jenkins, and AWS (EC2, S3, RDS, IAM)**. Also skilled in **React, Angular, and JavaScript**, delivering clean, testable code in **Agile** teams.

TECHNICAL SKILLS AND CERTIFICATION

- **Certifications:** [Oracle Certified Professional: Java SE 17 Developer, AWS Certified: Solutions Architect - Associate](#)
- **Programming Languages:** Java 17, JavaScript (ES6+), Python, TypeScript, SQL, PL/SQL, HTML5, Kotlin, CSS, Bash, C, C++
- **Backend & Frameworks:** Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, Node.js, Express.js
- **Frontend Technologies:** React.js, Angular, Vue.js, JSP, Redux, Bootstrap, React-Bootstrap, jQuery, AJAX
- **API & Microservices:** RESTful API Development, Microservices Architecture, Spring Cloud, API Gateway, Serverless (AWS Lambda)
- **Authentication & Security:** JWT, OAuth 2.0, Refresh Tokens, Role-Based Access Control (RBAC), Spring Security
- **Databases:** MySQL, PostgreSQL, Oracle 11g, Amazon RDS, DynamoDB, MongoDB, Amazon Redshift
- **Cloud & Deployment:** AWS (EC2, S3, RDS, Route 53, SNS, CloudWatch, Dynamo DB), Azure, Google Cloud, GCP
- **DevOps & CI/CD:** [Jenkins, Maven, Docker, Kubernetes, Terraform, Nginx, Postman](#)
- **Version Control & Build Tools:** Git, GitHub, GitLab
- **Testing Frameworks:** JUnit 4, JUnit 5
- **Development Environments:** IntelliJ IDEA, Eclipse, Visual Studio Code, Webpack, Babel, Linux

PROFESSIONAL EXPERIENCE

Software Development Engineer | **Amazon Web Service (AWS)** – Jersey City, NJ, USA

AWS Organizations Cache Service Platform

Jul 2025 – Present

Developed a scalable caching platform for AWS Organizations data, enabling internal AWS Support services to access organization metadata with lower latency and higher TPS. Built using **Kotlin, Java, AWS Fargate, DynamoDB, SNS, Spring Boot, and Microservices Architecture** with multi-region deployment support and automated monitoring.

Technologies Used:

- **Programming Language:** [Java, Kotlin, TypeScript](#)
- **Frameworks and Libraries:** [Spring Boot, Smithy, JUnit](#)
- **Database & Messaging:** [DynamoDB, SNS](#)
- **Cloud Services & DevOps:** [AWS Fargate, ESC, Lambda, CloudWatch, Docker, AWS, CDK, Jenkins](#)
- **Architecture & APIs:** [REST APIs, Microservices, Event-Driven Architecture](#)

Backend Development:

- Designed and developed **microservices-based cache services** using **Java/Kotlin** and **Spring Boot** for scalable backend processing.
- Implemented secure and scalable **REST APIs** with **Smithy-based data models** and layered **API-Service-DAO architecture**.
- Built an **anti-entropy synchronization mechanism** using **DynamoDB TTL event streams** to refresh cached data automatically.
- Integrated **SNS notifications** and **DynamoDB streams** to support real-time **event-driven workflows**.
- Developed **unit, integration, and canary tests** to improve service reliability and production stability.

Cloud & DevOps:

- Deployed containerized applications on **AWS Fargate** with **Application Load Balancer (ALB)** integration to ensure high availability and scalability.
 - Supported **multi-region** and **multi-partition deployments** to improve fault tolerance and system resilience.
 - Automated **CI/CD pipelines** using **AWS CDK**, **Jenkins**, and **Docker** for streamlined build and deployment processes.
 - Configured **AWS CloudWatch alarms** and automated rollback mechanisms to prevent failed production deployments.
 - Developed **AWS Lambda-based canary monitoring solutions** to simulate customer traffic and continuously validate API and service health.
 - Implemented **Infrastructure as Code (IaC)** using **AWS CDK** and automated deployment workflows to improve infrastructure consistency and operational efficiency.
-

Software Developer | Infosys – Atlanta, GA

E-Commerce Application

Sep 2024 – May 2025

Developed and deployed a scalable **MERN Stack** e-commerce application delivering a seamless shopping experience with secure authentication, responsive UI, and efficient backend services. Built robust **RESTful APIs** using **Node.js** and **Express.js**, integrated **MongoDB** with **Mongoose** for dynamic data management, and implemented role-based access control for secure administration.

Technologies Used:

- **Front End:** [Java 17](#), [JavaScript](#), [Redux](#), [React-Bootstrap](#), [HTML5](#), [CSS3](#), [JavaScript](#)
- **Backend:** [Node.js](#), [Express.js](#), [MongoDB](#), [Mongoose](#), [REST APIs](#)
- **DevOps & Cloud:** [AWS EC2](#), [AWS S3](#), [AWS IAM](#), [Jenkins](#), [CI/CD Pipelines](#), [Git](#), [Application Deployment](#)

Backend Development:

- Built scalable backend services using **Node.js** and **Express.js** to manage user requests, business logic, and transaction processing.
- Developed secure **RESTful APIs** enabling seamless communication between frontend and backend systems.
- Integrated **MongoDB** with **Mongoose** for flexible and efficient management of product catalogs, user profiles, and shopping cart data.
- Implemented **JWT Authentication** and **Role-Based Access Control (RBAC)** to secure customer and admin functionalities.
- Developed an **admin management portal** to streamline user management, product updates, and operational workflows.
- Optimized application performance using **Redis caching**, database indexing, and query optimization techniques to improve API response times.
- Automated deployment and testing workflows using **Docker**, **GitHub Actions**, and **CI/CD pipelines** to ensure reliable and efficient releases.

- Integrated **Payment Gateway APIs** and implemented **Transaction Validation Mechanisms** to support secure and seamless online purchases.
- Implemented centralized logging and monitoring using **Winston, Morgan, and AWS CloudWatch** to improve **System Observability** and troubleshoot production issues efficiently.

Frontend Development:

- Developed responsive and user-friendly interfaces using **React.js**, delivering a seamless shopping experience across desktop and mobile devices.
- Implemented reusable UI components with **React-Bootstrap**, improving application consistency, responsiveness, and maintainability.
- Utilized **Redux** for centralized state management to efficiently handle authentication, shopping cart operations, and product rendering.
- Enhanced frontend performance and user engagement using modern **JavaScript, HTML5, and CSS3** practices.
- Integrated frontend components with backend **REST APIs** to ensure smooth real-time data flow and dynamic content updates.

Deployment:

Deployed and maintained the **MERN stack e-commerce application** on **AWS EC2** using **Docker** and **Kubernetes** for containerized deployment and scalability. Automated build and release workflows with **Jenkins CI/CD pipelines**, utilized **AWS S3** for static asset storage, and implemented **Git** for version control and deployment management.

Java Software Engineer | Accenture – Remote

Air Travel Booking Application

May 2021 – Nov 2022

Developed a user-friendly airline ticket reservation system, showcasing full-stack development skills with technologies like **Java 17, Spring Boot, Hibernate, MySQL, JSP, Maven, Bootstrap, and Jenkins**. Integrated **microservices architecture** to enhance scalability and maintainability while automating the CI/CD pipeline for efficient development and deployment.

Technologies Used:

- **Frontend:** JSPs, JavaScript framework, jQuery, CSS, HTML5
- **Backend:** Spring Boot, Java 17, MySQL, Hibernate, MVC, Junit, Spring Java Mail Sender
- **Tools:** Jenkins

Backend Development:

- Developed a robust backend system using **Spring Boot** to manage core functionalities of the airline ticket reservation application.
- Utilized **MySQL** as the primary database and implemented **Hibernate** for seamless data management, including table creation and schema updates during application deployment and **Object-Relational Mapping (ORM)** to ensure efficient data interaction between Java objects and database tables.
- Implemented **MVC architecture** for a well-organized and maintainable codebase, separating Model (data), View (presentation), and Controller (logic) for a smooth user experience.
- Implemented robust server-side validations through annotations and validators.
- Conducted API testing with Postman to ensure endpoint functionality and reliability.
- Configured automated email notifications using **Spring Java Mail Sender** to keep users informed about booking confirmations and any relevant updates.

Frontend Development:

- Developed interactive user interfaces (UIs) using **JSPs** and improved UI aesthetics using **CSS**.
- Focused on responsive design principles to ensure an optimal user experience across desktops, tablets, and mobile devices.
- Structured web page layouts and content with **HTML5** for a clear and intuitive user experience.

Deployment:

Configured automated **CI/CD pipelines** using **Jenkins** to streamline build, testing, and deployment workflows. Deployed and maintained the application on **AWS EC2** using **Spring Boot**, **Maven**, and **MySQL**, while utilizing **AWS S3** for secure resource storage. Implemented **Git**-based version control and optimized deployment processes to improve application scalability, reliability, and release efficiency.

EDUCATION

Masters of Science in Computer Science,

University of Georgia

GPA – 3.6
